Astro on Azure

Astro is a fully-managed DataOps platform powered by Apache Airflow, integrating with your Azure environment to provide comprehensive orchestration and observability of your data pipelines.

Develop

- Build and deploy Airflow DAGs with the Astro CLI.
- Stay current with automatic updates and patches.
- 24/7 expert support for your Airflow needs.

Integrate

- Seamlessly connect to Azure Data Factory, Synapse, & SQL.
- Orchestrate pipelines across Azure services.
- Secure with Azure-native security & managed secrets.

Deploy

- Deploy via Azure Marketplace with one click.
- Manage with unified billing and single sign-on.
- Integrate with Azure DevOps for seamless CI/CD.

ASTRONOMER

The Astro Advantage

Built for Scale

Astro's cloud-native, elastic infrastructure is designed to scale with your workloads, whether you're handling batch processing or streaming data pipelines.

Operational Efficiency

Reduce time spent on manual upgrades, system maintenance, and debugging with automated updates, managed Airflow environments, and expert support.

Seamless Azure Integration

Leverage Astro's tight integration with Azure services to orchestrate your entire data flow, from data lakes to machine learning and analytics, without leaving your Azure environment.

Astronomer is trusted and used by the world's top data & ML teams
