

dbt on Astro

A seamless experience for deploying and managing dbt on Astro.

Deploy

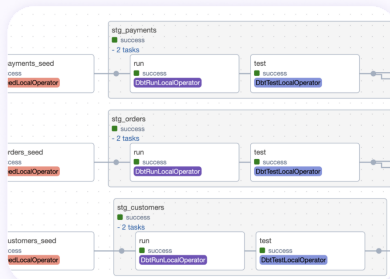

...dbt code across multiple codebases and teams to Astro

Your teams don't need to know Airflow – just write dbt and deploy it to production independently on Astro.

Observe

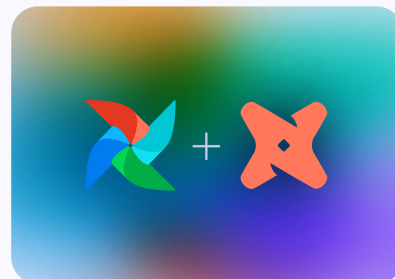

...dbt models with task-level views

Quickly detect and resolve problems with dbt tasks using Astronomer Cosmos, the open-source standard to integrate Airflow and dbt

Save

...up to 90% of costs associated with dbt projects

Only pay for your Airflow deployment costs with dbt on Astro. Save the additional charges for each model build and seats incurred on dbt Cloud

Cosmos has sped up our adoption of Airflow for orchestrating our System1 Business Intelligence dbt Core projects without requiring deep knowledge of Airflow. We found the greatest time-saver in using the Cosmos DbtTaskGroup, which dynamically creates Airflow tasks while maintaining the dbt model lineage and dependencies that we already defined in our dbt projects.
